SUMMARY

1st-year BCA student and Full Stack Developer. Built RoundOne, an AI-powered mock interview platform using Next.js 15, TypeScript, PostgreSQL, and the Gemini API — from zero knowledge of the stack to full production deployment. Previously built MERN stack applications with JWT auth and RESTful APIs. Completed NeetCode 150 in Java. Actively seeking a remote internship.

TECHNOLOGIES

Languages: JavaScript, TypeScript, Java, Python

Frontend: React.js, Next.js (App Router), TailwindCSS, HTML, CSS

Backend & APIs: Node.js, Express.js, REST APIs, JWT Auth, Gemini API

Databases: PostgreSQL, MongoDB, MySQL

Auth: OAuth (Google, GitHub), Supabase Auth, JWT

Tools & Platforms: Git, GitHub, Vercel, Supabase, Render

PROJECTS

RoundOne — AI Mock Interview Platform [Live](#) | [GitHub](#)

Next.js 15, TypeScript, Supabase (PostgreSQL), Gemini API, TailwindCSS, Vercel

- Built a full-stack AI interview platform where users configure a session (role, experience level, type, question count) and practice with a conversational AI that adapts follow-up questions based on their actual answers
- Integrated Google Gemini API for dynamic question generation and post-session evaluation — returns per-answer scores (0-100), written feedback, strengths, weaknesses, and a verdict
- Implemented cookie-based JWT auth with Google and GitHub OAuth via Supabase Auth, with row-level security enforced across all database tables
- Built voice interview mode using the Web Speech API, silent time tracking for confidence and fluency metrics passed to Gemini, and session resume for interrupted interviews
- Added session history with score trend tracking and shareable public result links; deployed to Vercel with dual API key rotation for Gemini quota management

WorkNest — Task Management Platform [Live](#) | [GitHub](#)

React.js, Node.js, Express.js, MongoDB Atlas, TailwindCSS

- Full-stack platform where teams can create, assign, and track tasks across job workflows, built end-to-end with the MERN stack
- Designed 10+ RESTful API endpoints with Node.js and Express covering task lifecycle and user management
- Secured the application with JWT-based authentication and authorization, ensuring users only access their own data
- Modelled and queried data efficiently using MongoDB Atlas with a schema designed around team and task relationships

ACHIEVEMENTS

- Completed NeetCode 150 — 150 curated LeetCode problems covering core DSA patterns, solved in Java

EDUCATION

BCA — Dr. Shyama Prasad Mukherjee University, Ranchi, Jharkhand

1st Year | Expected Graduation: 2029
