SUMMARY

1st-year BCA student and Full Stack Developer specializing in the MERN stack. Built and deployed 3 full-stack web applications with JWT authentication, RESTful APIs, and cloud-hosted databases. Currently advancing into Next.js, TypeScript, and Spring Boot. Actively seeking an internship to contribute to a real engineering team.

TECHNOLOGIES

Programming Languages: JavaScript, Java, Python

Frontend: React.js, Next.js, TailwindCSS, HTML, CSS

Backend and APIs: Node.js, Express.js, REST APIs, JWT Authentication and Authorization

Databases: MongoDB, MySQL

Tools & Platforms: Git, Github

PROJECTS

WorkNest - Task Management Platform for Teams

React.js, Node.js, Express.js, MongoDB Atlas, TailwindCSS

- Full-stack platform where teams can create, assign, and track tasks across job workflows — built end-to-end with the MERN stack
- Designed 10+ RESTful API endpoints with Node.js and Express covering task lifecycle and user management
- Secured the application with JWT-based authentication and authorization, ensuring users only access their own data
- Modelled and queried data efficiently using MongoDB Atlas with a schema designed around team and task relationships
- Delivered a fully responsive UI with seamless frontend-backend integration

iNotebook - Secure Personal Notebook

React.js, Node.js, Express.js, MongoDB Atlas, TailwindCSS

- Cloud-based notebook app where users can create, edit, and delete personal notes with full privacy guarantees
- Implemented user authentication and authorization so each user's notes are completely isolated and inaccessible to others
- Built RESTful APIs for note and user management, handling all CRUD operations server-side
- Integrated MongoDB Atlas for persistent, cloud-hosted storage with a clean schema separating users and notes
- Structured the React frontend around reusable components with clear separation of logic and UI.

Horror Story Game

React.js, TailwindCSS

- Browser-based, choice-driven horror story game where every decision branches the narrative
- Managed complex story state across multiple decision trees using React's state and component architecture
- Built entirely with reusable components for scenes, choices, and progression
- Designed an immersive, responsive UI using TailwindCSS that works across all screen sizes

ACHIEVEMENTS

- Completed NeetCode 150 — a structured set of 150 curated LeetCode problems covering core DSA patterns, solved in Java

EDUCATION

BCA - Dr. Shyama Prasad Mukherjee University, Ranchi, Jharkhand

1st Year. Expected Graduation: 2029
